Course Overview The National Incident Management System (NIMS) provides a consistent nationwide template to enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents. This includes public information. The public information systems described in NIMS are designed to effectively manage public information at an incident, regardless of the size and complexity of the situation or the number of entities involved in the response. Note: IS-702.a is an updated version of the IS-702 course. If you have successfully completed IS-702, you may want to review the new version of the course. For credentialing purposes, the courses are equivalent. Course Objectives: The goal of this course is to facilitate NIMS compliance by providing you with the basic information and tools that you need to apply NIMS public information systems and protocols during incident management. At the conclusion of this course, you should be able to: -Define NIMS public information systems to include onsite operations, the Joint Information System (JIS), and the Joint Information Center (JIC), and how they relate to each other. -Describe the JIS/JIC process of gathering, verifying, coordinating, and disseminating information by public information and incident management personnel. -Identify each agency involved in given emergency situations and the role of each in the JIS to ensure appropriate situational awareness information is communicated to the public. -Define key terms related to public information systems to include the relationship with multiagency coordination systems and the field. Identify typical resource requirements for public information systems. Primary Audience This course is designed for local and State public information officers. Prerequisites N/A. However, completion of IS 700.a - National Incident Management System (NIMS), An Introduction is recommended.

Winner of ASIS International's 2015 Security Book of the Year Award Terrorist attacks occur daily and are increasingly being aimed at civilian populations around the world. Battlefield lines have been redrawn to include churches, schools, hospitals, and malls. This breach of moral boundary is shocking and invokes fear two primary goals of terrorism.

Is emergency management education undoing an age-old tradition in the American Fire Service? Has the time arrived to educate emergency managers in college classrooms rather than in twenty years of tactical operations experience? Over one hundred forty-three (143) institutions of higher education are now offering certificate or degree programs in emergency management with no tactical operations experience required for admission. Resistance by veteran law enforcement officers and fire fighters may have to be overcome if we are to prepare emergency managers with required skill sets. Dr. Tom Phelan explores the skills being taught to emergency management students and addresses the concerns of experienced first responders in accepting their leadership. "Discusses the value of emergency management education in the post-9/11 world *Makes clear the need for educating emergency managers to prepare them for emergency manager leadership *Helps bridge the gap between emergency management and first responders *Should be required reading in every college emergency management curriculum *The book is clear, concise, and an "easy read"

Principles of Emergency Management: Hazard Specific Issues and Mitigation offers preparedness and mitigation recommendations for advanced emergency planning. Because disasters are so unpredictable, advance planning is needed to effectively respond to and mitigate against the potential effects of such events. Whether a disaster is natural or man-made, accidental or deliberate, the best way to protect the public is by implementing an integrated emergency management system incorporating all potential stakeholders through all phases of the event. As such, the book suggests best practices for drills, exercises, and pre-event team building and communication. More than a dozen contributors offer their professional expertise on a wide variety of topics, including: Emergency operations center management Continuity planning of vital services in the aftermath of a disaster The role of the public health official Developing public-private partnerships Specific types of disasters, including terrorism, agrorrorism, pandemics, and active shooter incidents Mass care, sheltering, and human services The special needs of children in disasters Traditional and social media and their impact on emergency management The book is a valuable planning resource for those tasked with managing operations to prepare for, mitigate, and respond to disasters.

Developed and implemented by the United States Department of Homeland Security, the National Incident Management System (NIMS) outlines a comprehensive national approach to emergency management. It enables federal, state, and local government entities along with private sector organizations to respond to emergency incidents together in order reduce the loss of life and property and environmental harm.

The National Fire Protection Association (NFPA) And The International Association Of Fire Chiefs (IAFC) Are Pleased To Bring You The Second Edition Of Fire Officer: Principles And Practice, A Modern Integrated Teaching And Learning System For The Fire Officer I And II Levels.
